"Stories can become successful because they create emotion in people, and emotions are transferred to the reader. However, they are also a tool to the experienced writer who can show off his or her mastery of narrative writing. Many writers like to wear their artistic prowess on their sleeve. They develop a strong work ethic and feel the need to show their readers what they are doing, why they are doing it and what they are capable of. The StoryO software tool helps writers organize ideas and results through timeline-based documentation. This method of organizing allows you to create timelines for your idea, whether it's a novel, film, play, or a television series. Combine this organizational tool with an innovative, yet easy-to-use interface and a set of highly useful features, such as time-saving templates, you've got a powerful and easy to use writing tool. Through the use of timeline-based documentation, this tool allows you to envision your story and write it, all in the same sequence. Just make notes on each day, each hour, each minute and set the event for when you want it to start. The single, most noticeable drawback to this way of working is the fact that you can only document your story from your perspective. However, this is not a major concern, and the activity itself often transforms great ideas into story." Supported languages: English, French, German, Italian, Portuguese, Russian and Spanish. Universal: No. Supports all major operating systems: Windows (7, 8/8.1 and 10) and Mac (10.9.2). The bug that occurs when you want to tag paragraphs in order to organize ideas in a story has been a pain in the rear, the template that uses to organize events in a story, doesn't seem to like re-ordering them around. We're fine with that, as long as it doesn't happen to us, and there's nothing we can do about it. The formatting inside the document is really well done. We feel like we can reach our desired outcome, and there is no reason for us to be dissatisfied. Other than the occasional UI (User Interface) quirk that I can't seem to replicate, the app works really
